

PLAYING THE GAME

Take turns in clockwise order, following these 4 steps (also shown on the threat board):

1. Reveal Threat
2. Activate Climber
3. Resolve Threat
4. Draw to 3

1. REVEAL THREAT

Flip over the left-most facedown card in the threat row.

EVENTS

Threat cards specify a target climber ("Active" or "Highest"), followed by an effect. When the threat card resolves, the target (or targets) suffers the effect.

ATTACKS

Attacks feature area of effect diagrams. Place attack marker around the specified target. Anyone caught in any of the spaces highlighted in the diagram is hit on resolve.

MULTIPLE ATTACKS

Some attacks use multiple markers and/or other points of origin. Even if you are in overlapping attack areas, you suffer the effect **only once**.

2. ACTIVATE CLIMBER

Choose card to generate **AP** and **protection Icons**. (Skill is ignored. Protection icons protect during activation phase.)
Spend AP to perform actions – mix / match / repeat actions at will.
After AP are used up, put AP card faceup on discard.
If **EMPTY HANDED**, generate 2 AP.

CLIMB - 1AP per orthogonal step.
JUMP - 3 AP for 2 steps orthogonally, ignore space you jumped over.
GLIDE - 1 AP per move down and/or down-diagonal. Ignore space you glide over.
STRIKE -1 AP per damage. Suffer 1 Blight per strike to Teal crystals.
REST - 2 AP to shuffle discard pile (AP card not included) and put under Grip deck. On Ledge only.
MEND - 1 AP per health.

3. RESOLVE THREAT

Resolve effect of threat card. Multiple effects: top to bottom, left to right.

4. DRAW TO 3

Discard any number of cards from hand. Draw up to 3. If Grip deck runs empty, you start falling.
HANGING BY A THREAD: You don't have to draw your last card.

ANYTIME ACTIONS

Can be triggered anytime (between actions of *any* player, before threat effect, etc.), but can't interrupt other effects (threats / anytime actions).
Use Skill: Card's bottom half - resolve effect, then discard.
Let Go: Start falling.
Forage: Pick up, use or toss a mushroom (up to 3 spaces orthogonally).
Character Skills: Can be used anytime if costs and conditions met. Skills with multiple effects can be resolved in any order. Values are always "up to". Cost must be fulfilled before resolving.

FALLING

Start falling: Enter an empty space, Grip deck empty or Letting Go.
Move down until reaching a ledge.
No fall damage, but **terrain effects for all spaces during fall**.
Skills can be triggered during fall on any space (incl. starting space), but after resolved you continue falling.
No AP usage while falling.
You may ignore and "fall through" ledges.
If falling starts on ledge, you can immediately stop falling without moving.

GRIP

Cards in deck are **Grip**.
Lose Grip: discard X cards. Once Grip is empty, start falling.
Gain Grip: take X cards from discard randomly and put under Grip deck.

QUICK REFERENCE

ICONS

Health: Move on your player board when gaining/losing.

Blight: Move on your player board when gaining/reducing.

Grip: Discard cards from deck when losing. Place cards under deck when gaining.

Harmful Terrain: Lose 1 when entering.

Difficult Terrain: Lose 1 when entering.

Open Terrain: Fall when entering.

Ledge: Stop falling. Required for rest action.

Blighted Crystal: Gain 1 when striking.

: Direction of an effect (usually push).

: Point of origin for a leviathan attack.

: Point of origin for a climber jump skill.

MUSHROOM GUIDE

+2 : Gain 2 .

+2 : Gain 2 .

-1 : Reduce your by 1.

X: Strike X.

X: Climb X.

2: Glide up to 2.

: Ignore terrain once, or while activating, your AP card gains the icon.

: Ignore terrain once, or while activating, your AP card gains the icon.

: Ignore when striking once, or while activating, your AP card gains the icon.

Anchor: Stop falling. Cannot be in open space and deck cannot be empty.

Focus: Become focused.

+1AP: During your activation, gain +1AP.

Block 1: Prevent 1 loss, loss, or push.

Draw 1: Draw 1 card from your deck.

KEYWORDS

ACTIVE: The climber currently taking their turn.

ANCHOR: You may stop falling (without having to enter a ledge). Your deck cannot be empty, and you cannot stop in an open space.

Any Climber: Choose any climber (including your own) for the effect. Targeted climber decides how it is used.

Block X: Prevent X amount of Health loss, Grip loss, and/or push, split however you choose among effects during the current step of the turn. Block can't prevent injury gain or scenario keyword effects (e.g., "Frost").

Crystal Pool: see Rulebook page 11.

Delayed: When the threat card is revealed, the attack marker is not placed immediately, but at start of step 3 and then resolved immediately. Climbers can use anytime actions after placing the marker but before resolving the attack.

Enrage: Rotate the left-most facedown "normal" threat card in the row (unless all threat cards are enraged).

Focus: When climber becomes focused, ready focus token (flip faceup). Any skill while focused may apply +1 to a numerical value on that skill. Exhaust focus token (flip facedown). Can't use focus to modify skill costs, such as Grip or Blight.

Exhaust / Ready: Certain effects are exhausted when used; a component (token or card) is flipped facedown as a reminder. That effect cannot be used again until the component has been "readied" (flipped back faceup). Each effect specifies when it readies.

Highest, Lowest, Left-Most & Right-Most: Refers to the climber / component closest to the top/bottom row or the left/rightmost column of the map.

Miss: Additional effect on attack that is resolved if the attack does not affect at least 1 climber. If you use block to prevent some/all of the attack, don't resolve Miss effect (i.e., you were considered to be "hit").

Next: Climber who will activate next (clockwise order).

Push X: Move figure X spaces in indicated direction. Suffer applicable terrain effects for all spaces entered.

Range: Number of spaces from one component and/ or specific map space to another (counted orthogonally, but not necessarily in straight line).

Secure: When losing Grip, if card has "Secure" keyword, place it in your hand instead of discard pile.

Strike +X: Increases next strike value (action/skill) by X. Needs accompanying strike. Can't be split.

Swift: Threat card resolves immediately when revealed (i.e. during "Reveal Threat"). Climbers can use anytime actions after revealing (and placing marker if applicable) but before resolving threat card. After a swift effect, place an attack marker on card as reminder that it's been resolved.
